## Task 1: Passing Data from Main JSP's Page to Other JSP's Page

Objective : To demonstrate the use of `request.getParameter("fieldName")` for passing input from one JSP' page to another JSP's page.

### memberRegister.jsp

The screenshot displays the Apache NetBeans IDE interface. The top pane shows the source code of `memberRegister.jsp`. The code is an HTML document with a JSP page encoding of UTF-8. It includes a meta tag for content type and charset, a title "JSP Page", and a body containing a heading "Passing data from main JSP's page to other JSP's page". Below the heading is a form with a legend "Member Registration" and three input fields: "Ic No" (placeholder "Eg. 921012101245"), "Name" (placeholder "Key-in your name"), and a "Submit" button. The form also includes a "Cancel" button. The bottom pane shows a browser preview of the page at `localhost:8080/Lab2/memberRegister.jsp`. The browser displays the rendered HTML, showing the "Member Registration" heading and the input fields with their respective placeholders. The "Submit" and "Cancel" buttons are also visible.

```
<!--
Document : memberRegister

</p>
</fieldset>
</form>
</body>
</html>
```

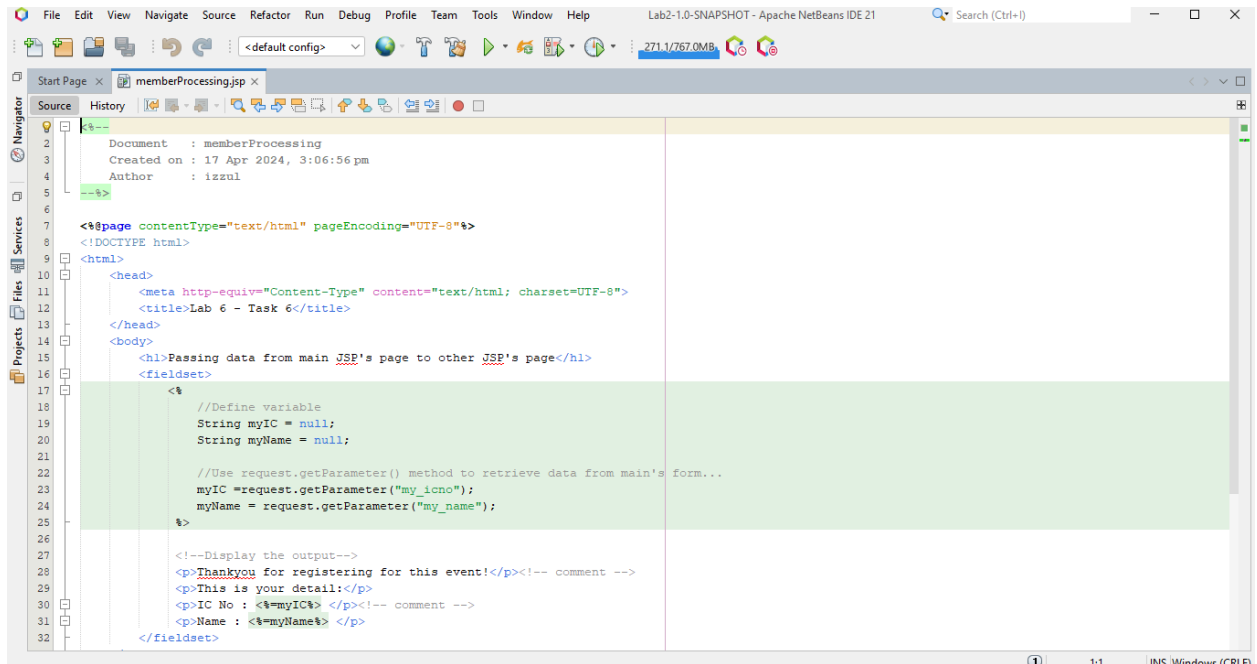

Passing data from main JSP's page to other JSP's page

Member Registration

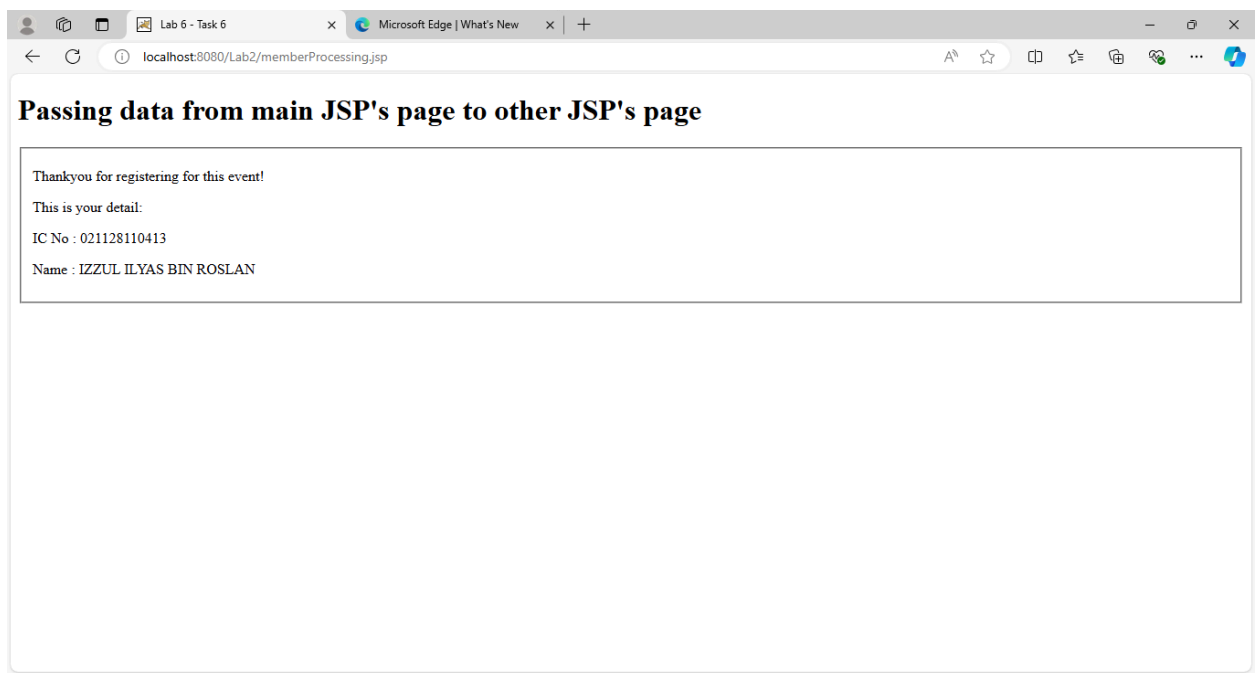

Ic No \* Eg. 921012101245 Name Key-in your name

Submit Cancel

## memberProcessing.jsp

```
1 <%--
2 Document : memberProcessing
3 Created on : 17 Apr 2024, 3:06:56 pm
4 Author : izzul
5 --%>
6
7 <%@page contentType="text/html" pageEncoding="UTF-8"%>
8 <!DOCTYPE html>
9 <html>
10 <head>
11 <meta http-equiv="Content-Type" content="text/html; charset=UTF-8">
12 <title>Lab 6 - Task 6</title>
13 </head>
14 <body>
15 <h1>Passing data from main JSP's page to other JSP's page</h1>
16 <fieldset>
17
18 <%
19 //Define variable
20 String myIC = null;
21 String myName = null;
22
23 //Use request.getParameter() method to retrieve data from main's form...
24 myIC = request.getParameter("my_icno");
25 myName = request.getParameter("my_name");
26 %>
27
28 <!--Display the output-->
29 <p>Thankyou for registering for this event!</p><!-- comment -->
30 <p>This is your detail:</p>
31 <p>IC No : <%=myIC%> </p><!-- comment -->
32 <p>Name : <%=myName%> </p>
33 </fieldset>
```

Reflection 1. How do you want to submit specific information from one form to next form? 2. What happened if the field name you specify in `request.getParameter("field_name")` in second page is different from the field name you defined in first page?

## Task 2: Using Mathematics Operations in JSP

Objective : To demonstrate the use of request.getParameter (“Mathematics operations”) in JSP’s page.

```
<!--
Document : Calculator

<head>
<meta http-equiv="Content-Type" content="text/html; charset=UTF-8"%>
<title>JSP Page</title>
</head>
<body bgcolor = "#a00FFF" text ="gold">

<%
String num1 ="0", num2 ="0";
int result = 0;
String op ="+";

char opchar = op.charAt(0);
if (request.getParameter("op") !=null) {
op = request.getParameter("op");
opchar = op.charAt(0);

num1 = request.getParameter("operand1");
num2 = request.getParameter("operand2");

switch(opchar){
case '0': result =Integer.parseInt(num1) + Integer.parseInt(num2);
break;
case '1': result =Integer.parseInt(num1) - Integer.parseInt(num2);
break;
case '2': result =Integer.parseInt(num1) * Integer.parseInt(num2);
break;
case '3': result =Integer.parseInt(num1) / Integer.parseInt(num2);
break;
case '4': result =Integer.parseInt(num1) % Integer.parseInt(num2);
break;
}
}

<center>
<h2>Basic calculator program in jsp</h2>
<form method ="get" name="f1">
<input type="text" size="20" name="operand1" value= <%= num1 %> />

<select name = op size = "1">
<option value ="0" >+</option>
<option value ="1" >-</option>
<option value ="2" >*</option>
<option value ="3" >/</option>
<option value ="4" >%</option>
</select>

<input type="text" size="20" name="operand2" value= <%= num2 %>/>
<p><br><br><br><br>
<input type ="submit" value= Calculate>

Result = <%= result + " " %>

</body>
</html>
```

## Reflection

1. How do you want to submit specific information from one form to next form?

By using post method and assigning field name.

2. What happened if the field name you specify in `request.getParameter("field_name")` in second page is different from the field name you defined in first page?

The information we intended to refer cannot be referred

## Task 4: Perform Calculation of Car Loan

Objective : Passing input to next page for further processing.

```

## Reflection

1. How you want to retrieve data from previous page?
2. Where the construction of logic occur for calculating Total Loan ( + interest) ?

## Task 5: Using JSP Page Directive to Call Java API

Objective : Use JSP page directive elements to call certain Java API.

## Reflection

1. What you have learnt from this exercise?

I have learnt how to import JSP page directive inside my JSP page.

2. Write a sample syntax how you want to use java Math object in JSP?

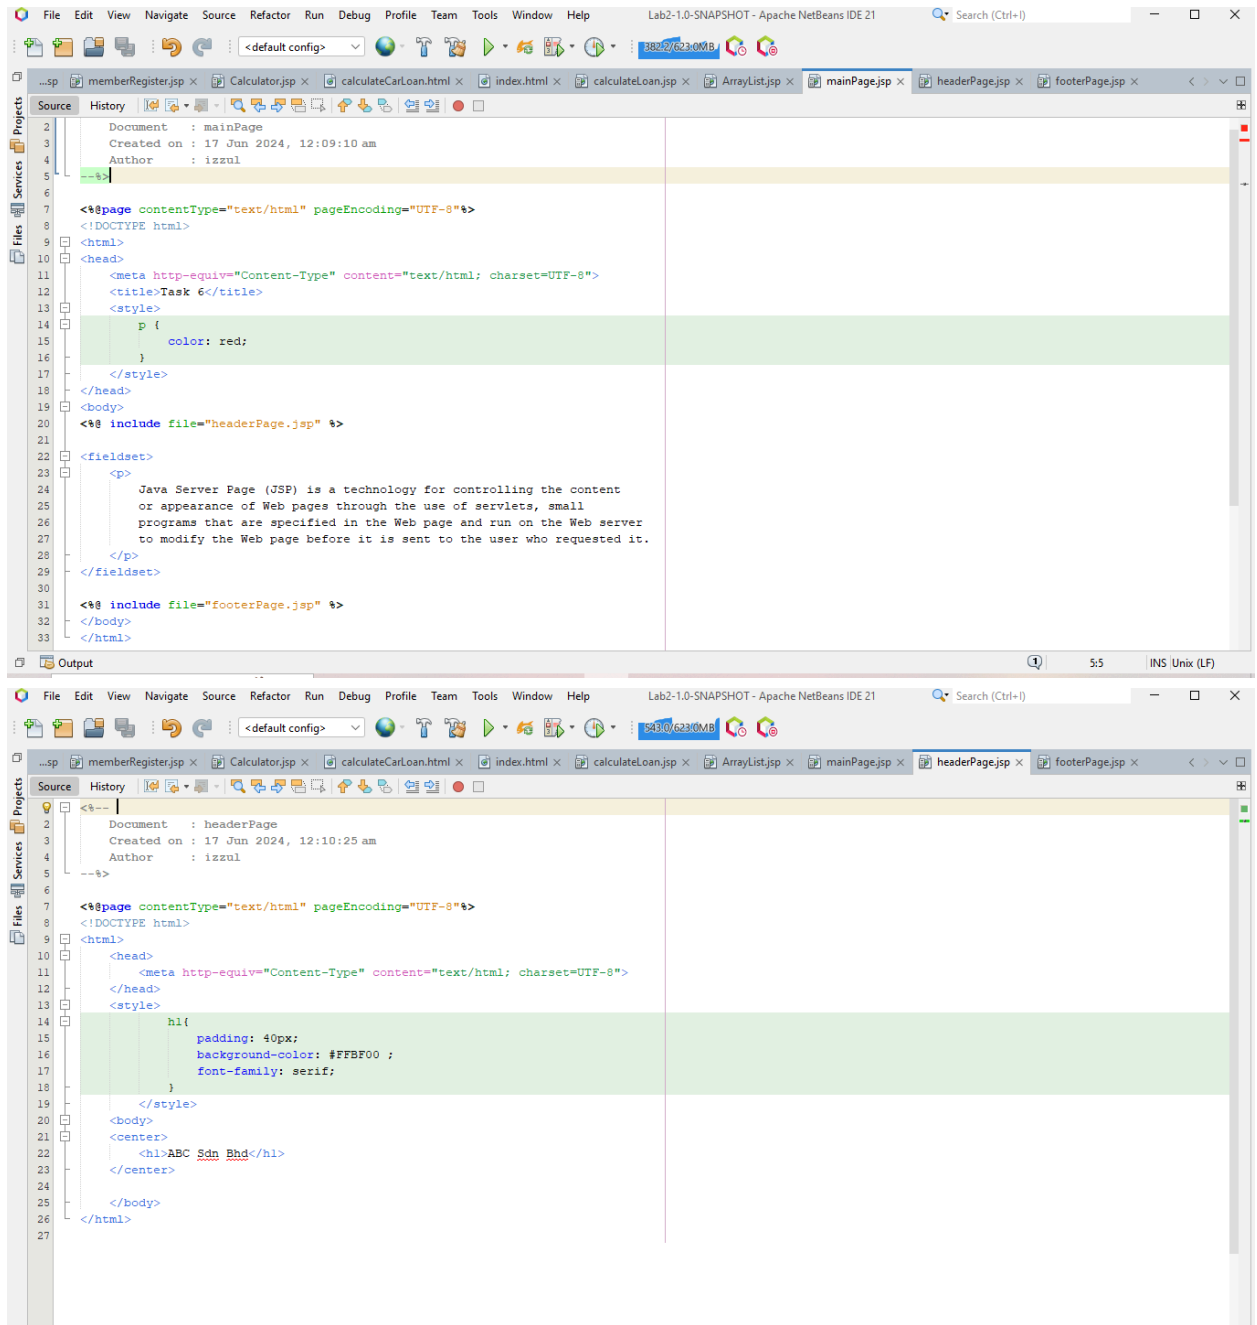

```
<%@page import="java.math.*"%>
```

3. List and write a sample syntax for THREE (3) of JSP page directive

```
<%@page import="java.util.Scanner"%>  
<%@page import="java.util.math.pow"%>  
<%@page import="java.util.*"%>
```

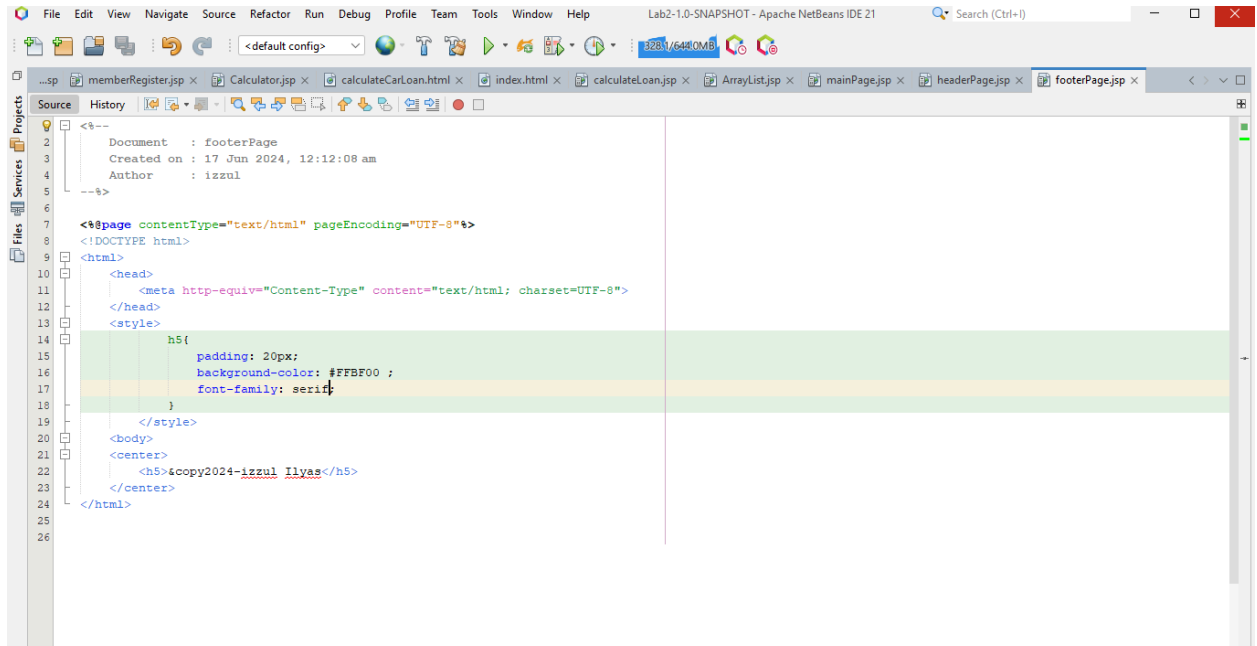

## Task 6: Use JSP Include directive for JSP Page

Objective : Demonstrate the use of JSP Page Include directive.

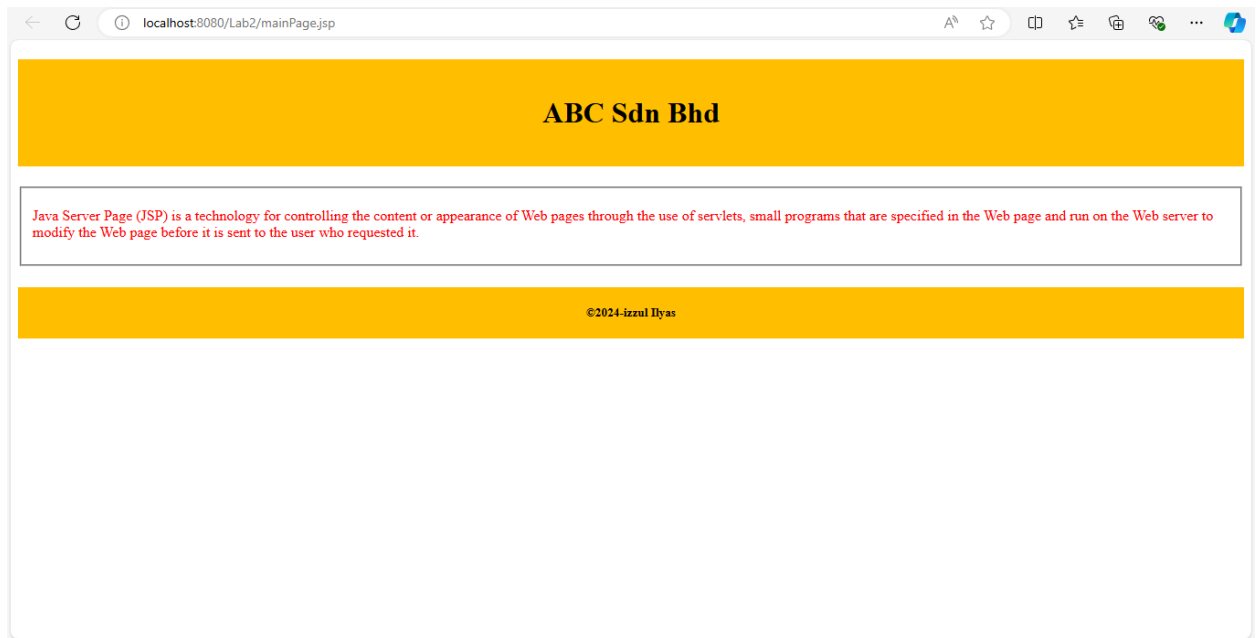

```

## Reflection

1. What you have learnt from this exercise?

I have learnt how to include a JSP page inside another JSP page.

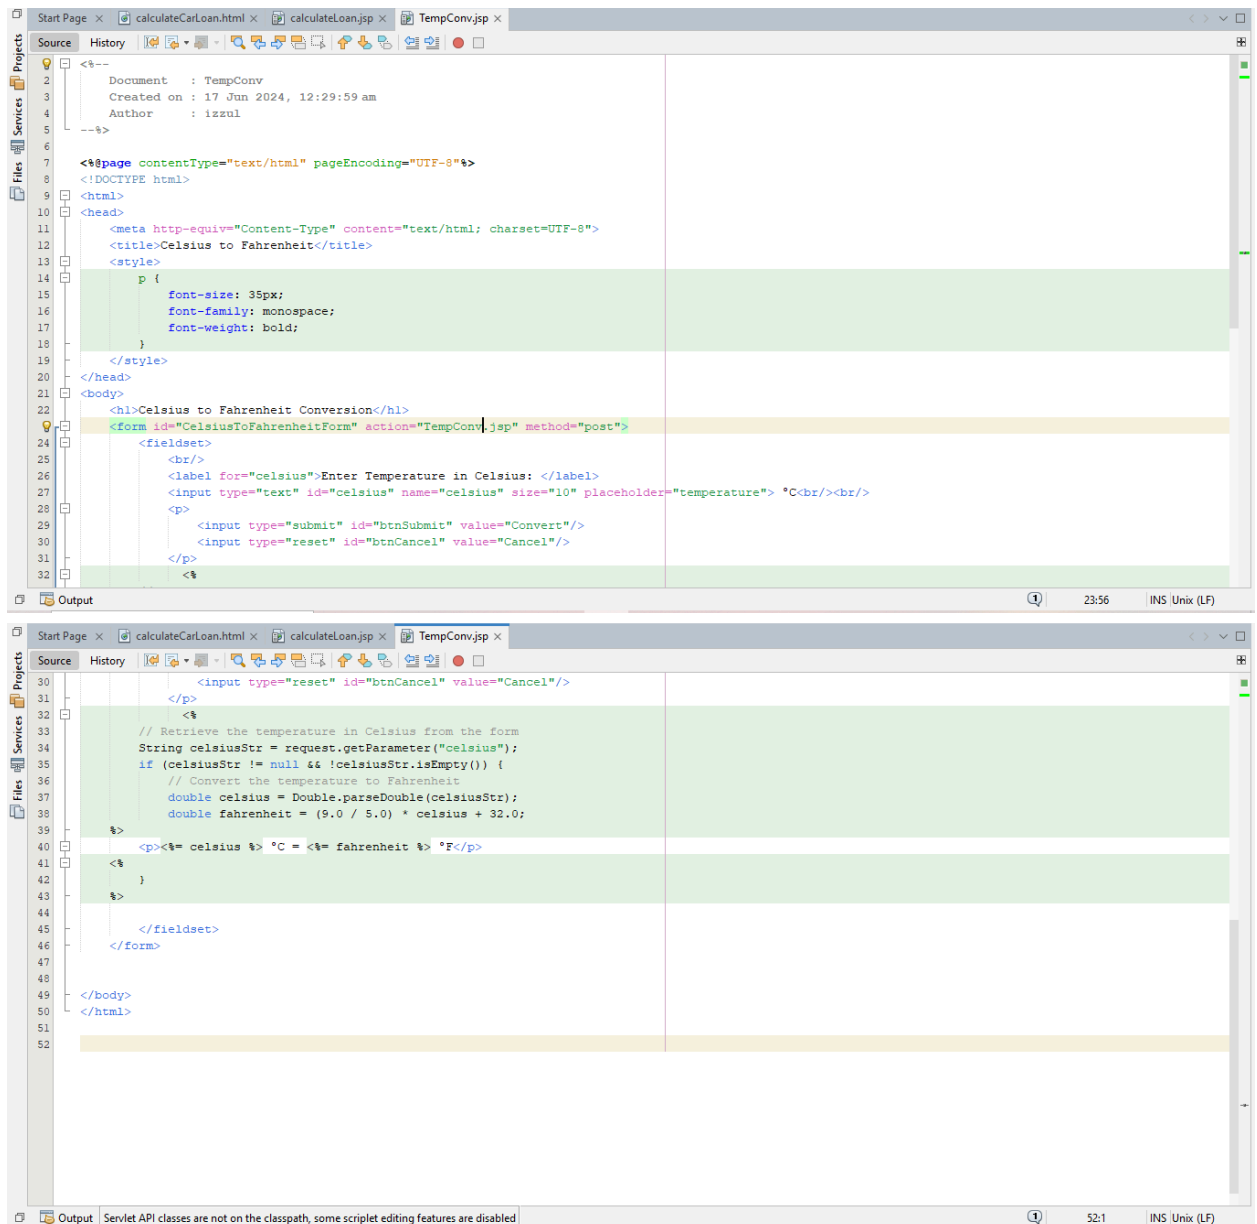

2. Write a syntax how you want to include common.html file that located at a directory known as master. `<%@ include file="master/common.html"%>`

## EXERCISE

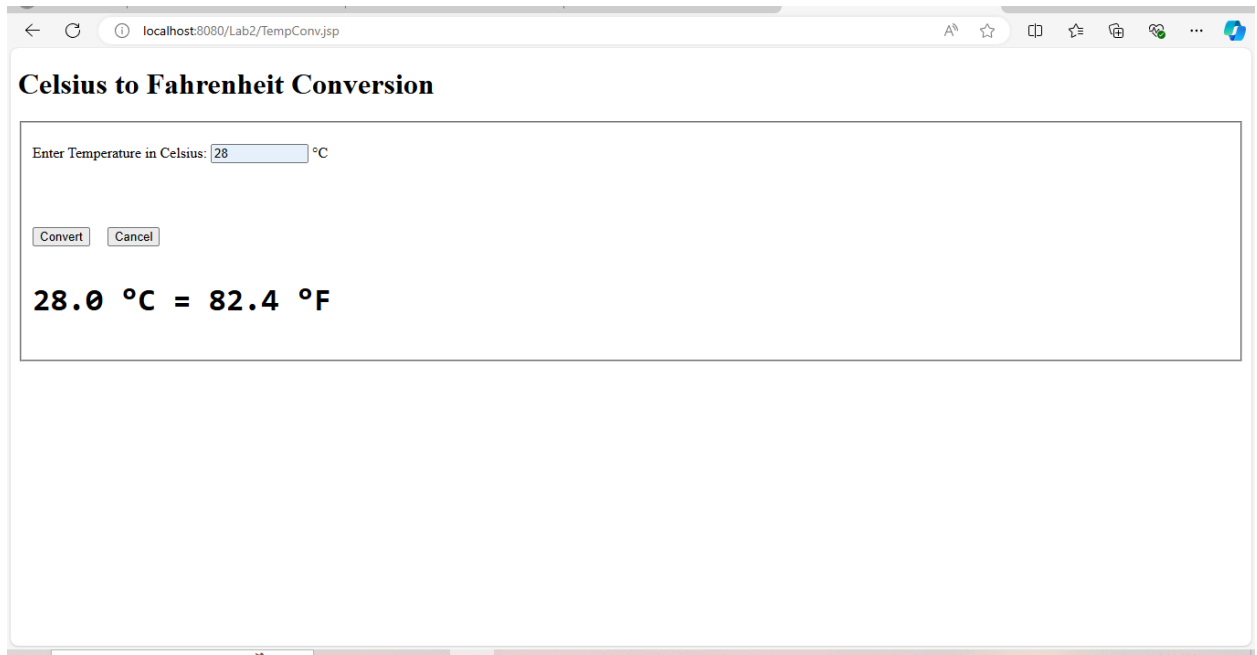

Write a JSP's page to convert temperatures to Fahrenheit temperatures and via versa. The formula is given as:

$$F = (9/5)C + 32$$

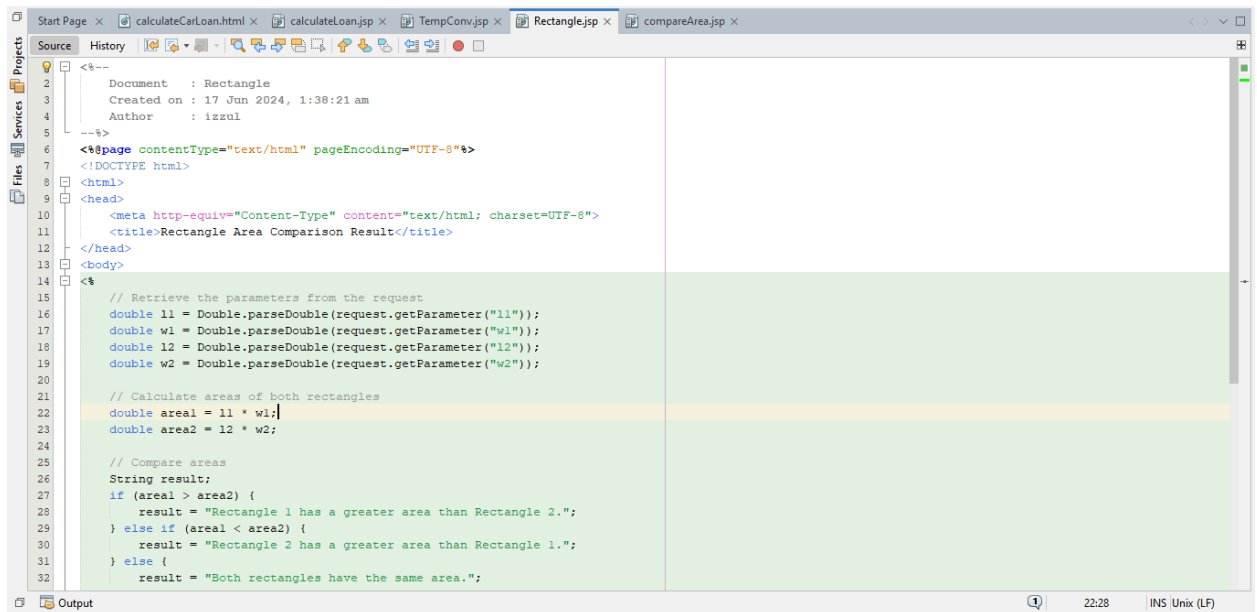

Your program should ask the user to enter a temperature in Celsius, and then display the temperature converted to Fahrenheit.

```

12 <title>Celsius to Fahrenheit</title>
13 <style>
14 {
15     font-size: 35px;
16     font-family: monospace;
17     font-weight: bold;
18 }
19 </style>
20 </head>
21 <body>
22 <h1>Celsius to Fahrenheit Conversion</h1>
23 <form id="CelsiusToFahrenheitForm" action="TempConv.jsp" method="post">
24 <fieldset>
25 <br/>
26 <label for="celsius">Enter Temperature in Celsius: </label>
27 <input type="text" id="celsius" name="celsius" size="10" placeholder="temperature"> °C<br/><br/>
28 <p>
29 <input type="submit" id="btnSubmit" value="Convert"/>
30 <input type="reset" id="btnCancel" value="Cancel"/>
31 </p>
32 </fieldset>
33 </form>
34
35 // Retrieve the temperature in Celsius from the form
36 String celsiusStr = request.getParameter("celsius");
37 if (celsiusStr != null && !celsiusStr.isEmpty()) {
38 // Convert the temperature to Fahrenheit
39 double celsius = Double.parseDouble(celsiusStr);
40 double fahrenheit = (9.0 / 5.0) * celsius + 32.0;
41
42 <p><%= celsius %> °C = <%= fahrenheit %> °F</p>
43 }
44
45 </fieldset>
46 </form>
47
48 </body>
49 </html>
```

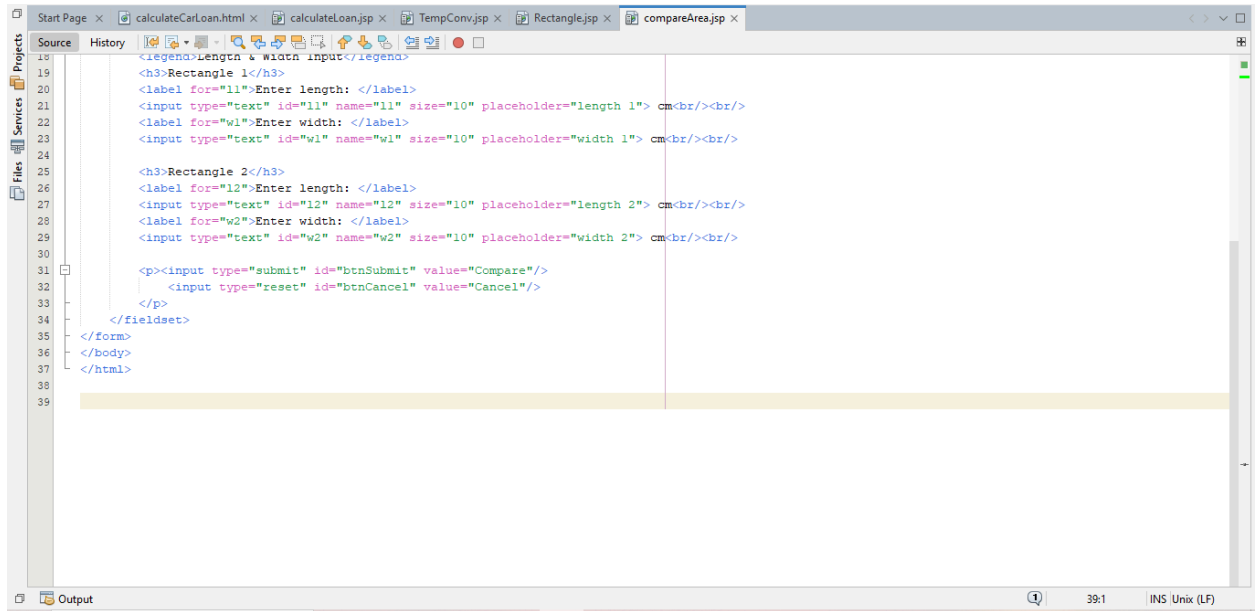

2. Write a JSP's form that asks for the length and width of two rectangles. The program should tell the user which rectangle has the greater area, or if the areas are the same. [Note: All result must be in 2 decimal places].

```
Start Page x calculateCarLoan.html x calculateLoan.jsp x TempConv.jsp x Rectangle.jsp x compareArea.jsp x
Source History
21 // Calculate areas of both rectangles
22 double areal = 11 * w1;
23 double area2 = 12 * w2;
24
25 // Compare areas
26 String result;
27 if (areal > area2) {
28     result = "Rectangle 1 has a greater area than Rectangle 2.";
29 } else if (areal < area2) {
30     result = "Rectangle 2 has a greater area than Rectangle 1.";
31 } else {
32     result = "Both rectangles have the same area.";
33 }
34 %>
35 <h1>Rectangle Area Comparison Result</h1>
36 <p>Area of Rectangle 1: <%= String.format("%.2f", areal) %> square cm</p>
37 <p>Area of Rectangle 2: <%= String.format("%.2f", area2) %> square cm</p>
38 <p><%= result %></p>
39 </body>
40 </html>
41
42
Output Servlet API classes are not on the classpath, some scriptlet editing features are disabled 42:1 INS Unix (LF)
```

```
Start Page x calculateCarLoan.html x calculateLoan.jsp x TempConv.jsp x Rectangle.jsp x compareArea.jsp x

Output:

The image shows two screenshots of a web application running on a local host.

**Top Screenshot: Comparing 2 Rectangle Areas**

The browser address bar shows `localhost:8080/Lab2/compareArea.jsp`. The page title is "Comparing 2 Rectangle Areas". Below the title is a section labeled "Length & Width Input".

**Rectangle 1**

Enter length:  cm  
Enter width:  cm

**Rectangle 2**

Enter length:  cm  
Enter width:  cm

At the bottom of the input section are two buttons: "Compare" and "Cancel".

**Bottom Screenshot: Rectangle Area Comparison Result**

The browser address bar shows `localhost:8080/Lab2/Rectangle.jsp`. The page title is "Rectangle Area Comparison Result".

Area of Rectangle 1: 20.00 square cm  
Area of Rectangle 2: 36.00 square cm  
Rectangle 2 has a greater area than Rectangle 1.
